DO YOU **TRUST** YOUR SCHOLARLY SOURCES?

The scholarly reputation of thousands of academics and institutions is at risk because of questionable publication practices. Our services allow you to check your references, providing insight into potential questionable citations.

THE PROBLEM

Predatory or deceptive scholarly publishing is an illegitimate open access business model where authors are “conned” into publishing their work in misleading, false, or so-called predatory journals.

These questionable scientific practices invalidate scholarly outputs. It is an intricate and multifaceted problem that has an adverse impact on all stakeholders in the scholarly landscape.

THE URGENCY

There has been an alarming rise in the number of questionable publishers capitalising on unscrupulous business opportunities. It is estimated that there are already more than 37 500 predatory journals, which expose scholars to irrevocable reputational damage.

Scientific peer-review is in need of tools to better differentiate between high risk and trustworthy citations.

THE METADATABASE SERVICE

Fidelior™’s propriety Metadatabase facilitates access to over 300,000 records and 91,000+ journal titles matched to a unique variety of journal sources, which include citation indices, national & international accreditation lists, disciplinary journal lists and predatory journal blacklists.

FIDELIOR™ ENHANCING TRUST IN SCHOLARLY PUBLISHING

Fidelior™ is a digital service that tackles the growing problem of predatory journals and questionable publishing.

Fidelior™’s tools report on questionable and reputable journals included in submitted references.

CITATION POLLUTION

Citations to articles in questionable journals, is a major consequence of predatory or deceptive publishing. A particular concern of citation pollution is how questionable science is infiltrating legitimate publications, citation indices, and journal lists.

Questionable publications can **misdirect** future research, and **damage** professional disciplines and scholarly reputations.

WHY USE FIDELIOR™?

Fidelior™ automates and simplifies the process of assessing research for the presence of questionable publications and citation pollution.

UNDERSTANDING THE PROBLEM

Currently, scholarly support services do not allow us to automatically and adequately differentiate between questionable and trustworthy citations.

Therefore, many authors unknowingly participate in citation pollution.

WHAT FIDELIOR™ CAN DO?

- **Identify** low-quality or suspicious journals.
- **Find** good publication outlets & sources.
- **Review** lists of references.
- **Pinpoint** mistakes on journal lists.
- **Identify** non-listed journal titles.

SEARCH JOURNAL TITLES

The **Journal Search Tool** offers basic functionality to search and browse the Fidelior™ Metadatabase.

A user can search according to a **Journal Title** or **ISSN**.

UPLOAD MANUSCRIPTS

The **Citation Report Tool** automates the current manual process of checking references across multiple recognised journal sources.

The tool simplifies the process of reviewing lists of references.

The screenshot shows the Fidelior interface. At the top, there is a search bar with the text "Thesis references" and a "Submit" button. Below the search bar, there is a section for "Reference list page range" with a dropdown menu showing "e.g. 1-5, 8, 11-3" and a "Submit" button. Below that, there is a section for "Select your document focus areas:" with a list of categories: Formal sciences, Humanities, Natural sciences, Professions and applied sciences, Social sciences, and Other. Each category has a dropdown arrow. At the bottom, there are "Submit" and "Remove" buttons. On the right side, there is a preview of a document page titled "REFERENCES" with a list of references.

WHO WE ARE?

Fidelior™ is one of the trading platforms for **Iontaofa Intelligence Ltd**, a company registered in Ireland and supported by a team of over 12 experts from Belgium, Ireland, South Africa and the UK.

FOR CLUSTERS

For Clusters pricing is tailored for small organisations or institutional sub-units (e.g., departments) with low numbers of users (typically less than 100 users) and high report usage.

FOR EDUCATION

For Education pricing is tailored for universities and education institutions, with large numbers of users and high report usage.

Special discounts, based on the United Nations' HDI, apply to educational institutions.

PRICING OPTIONS

Our pricing caters for individual users, small and large education institutions, and corporate publishers.
